

## INTEGRATED SUSTAINABILITY POLICY

Aguas Esperanza SpA carries out its work considering Sustainability among its priority focal points, respecting the environment where it conducts its activities and safeguarding a harmonious relationship with stakeholders in its area of influence.

This Integrated Sustainability Policy is applicable to all directors, executives, workers and collaborators of the company (all of them referred to as the "Involved Parties"). Therefore:

- i. **Responsibility for the Integrated Sustainability Policy falls on all Involved Parties based on the performance of their various roles and duties**, promoting a transparent organization that respects human rights, with corporate probity as the foundation of development.
- ii. **We are committed to leading our operation's environmental care**, responding to indicators that allow us to comply with our performance in Sustainability management, as well as reduce our carbon and water footprints to promote the use of saltwater for mining processes in areas with a shortage of water.
- iii. **We promote relationships of respect and collaboration with local communities**, supporting their social and economic development when necessary and respecting indigenous rights and cultures.
- iv. **We manage the concept of Sustainability responsibly**, complying with current regulations, reducing environmental risks and continuously improving our management system through corrective actions and audits.
- v. **We understand the territorial relevance of northern Chile**, where continental water is scarce and towns are constantly growing, focusing on sustainable solutions for this important area of the country.
